

1060x750x175 Introduction of printed plastic pallet

1. Design renderings :

2. Basic parameter table:

Dimensions	1060mm (length) × 750mm (width) × 175mm (height)		
Design load	Static load : 3 tons		Dynamic load: 1.5 tons
Total mass (weight)	17 ± 3% (Built-in steel pipe)		
Main raw materials	New high density polyethylene (HDPE)		
Operating temperature	-25 °C ~ + 45 °C		
Product color	Blue (other by mutual agreement)		
Structure and process	Product Enhancements	Bottom	Steel pipe 3 root
	Processing technology	Welding process	

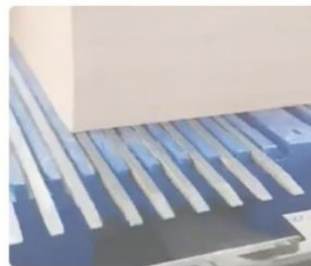

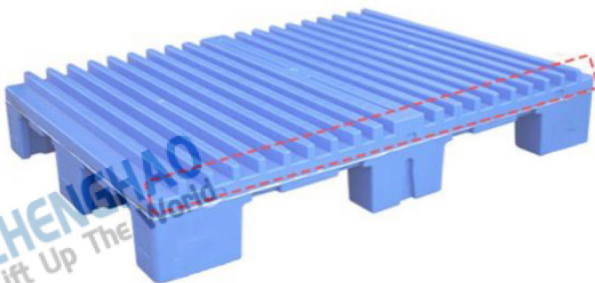

3.Product Introduction:

The printing-specific pallet product series is a special plastic pallet customized and developed for the characteristics of the printing industry. Zhenghao printing pallets are made of high-quality environmentally friendly modified materials, which can be recycled and reused. They inherit the

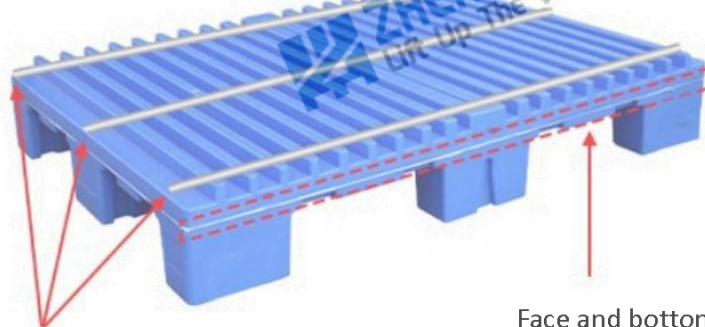

excellent characteristics of plastic pallets, such as beauty, insect-free, burr-free, mildew-free, and strong durability, and gradually replace wooden pallets as an ideal carrier for printing paper. At present, this series of products has more than 30 models, which are mainly matched with BOBST, HEIDELBERG, KBA, KOMORI, MANROLAND, MITSUBISHI/RYOBI, Evergreen, Beiren and other printing equipment. They are suitable for the transportation, placement, turnover of paper in the printing industry, and non-stop paper loading during the printing process.

4. Product features :

1) Groove structure design, used in professional paper turning machines, insert rod to feed paper without stopping the machine.

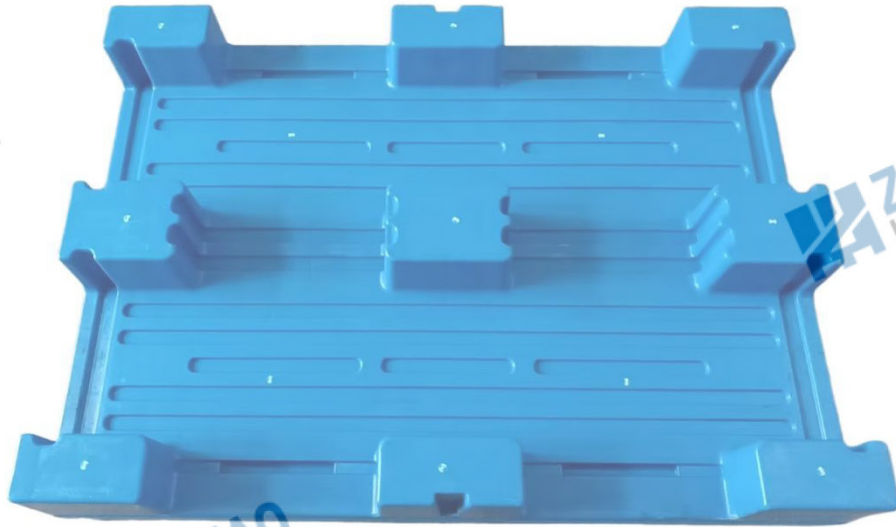

2) Three steel pipes are built in to strengthen the load-bearing capacity, and the face and bottom are combined by welding technology.

Built-in 3 steel pipes to enhance load-bearing capacity

Face and bottom welding

3)The bottom is flat and easy to clean, with grooved stripes for anti-slip design, and nine flat feet that can be placed on the automatic conveyor line.

5.Applicable scenarios:

6. Product quality standards :

- 1) Appearance: The surface of the tray is smooth , without burrs , cracks and deformations that affect use , burrs on the edges , and the gate is flat.
- 2) There is no obvious color difference on a single pallet, and the color of the same batch of products is basically consistent.
- 3) Inspection standards

Reference GB/T 1523 4 - 1994 "Plastic Flat Pallets " , requirements outside the standard shall be agreed upon by the supplier and the buyer.
