PRODUCT USAGE

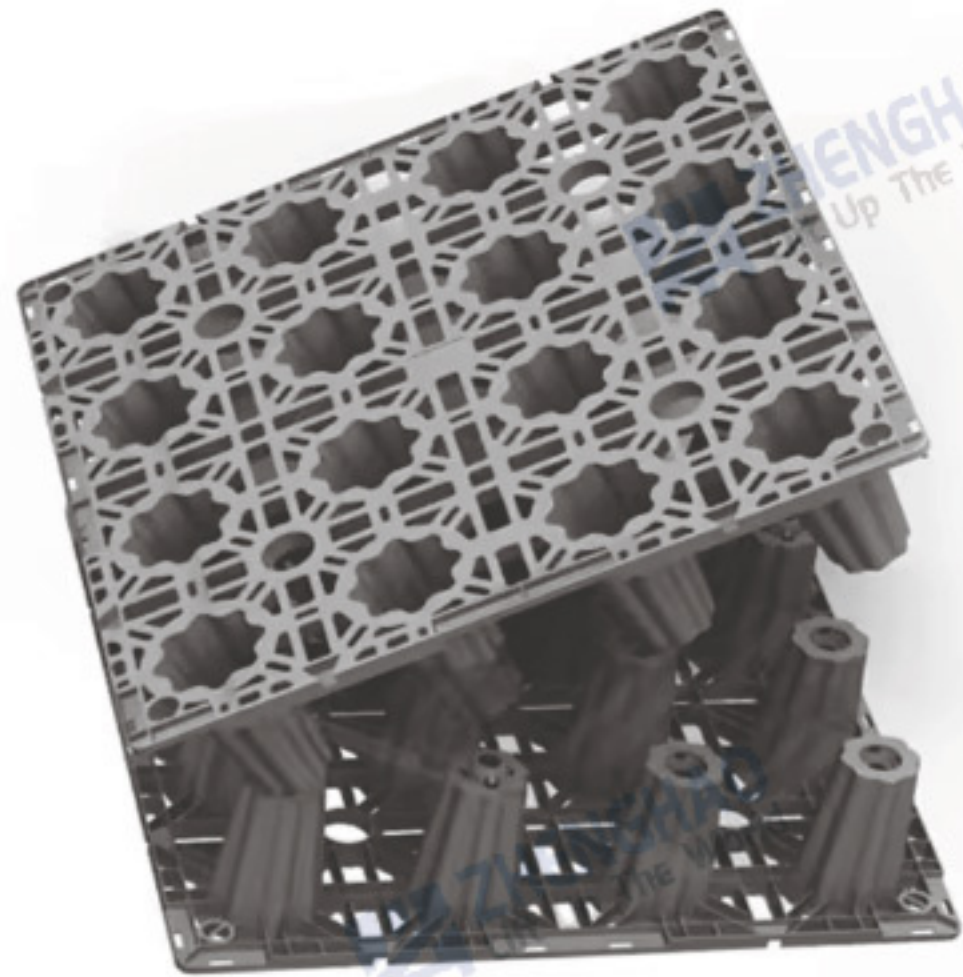

Help you better understand our products

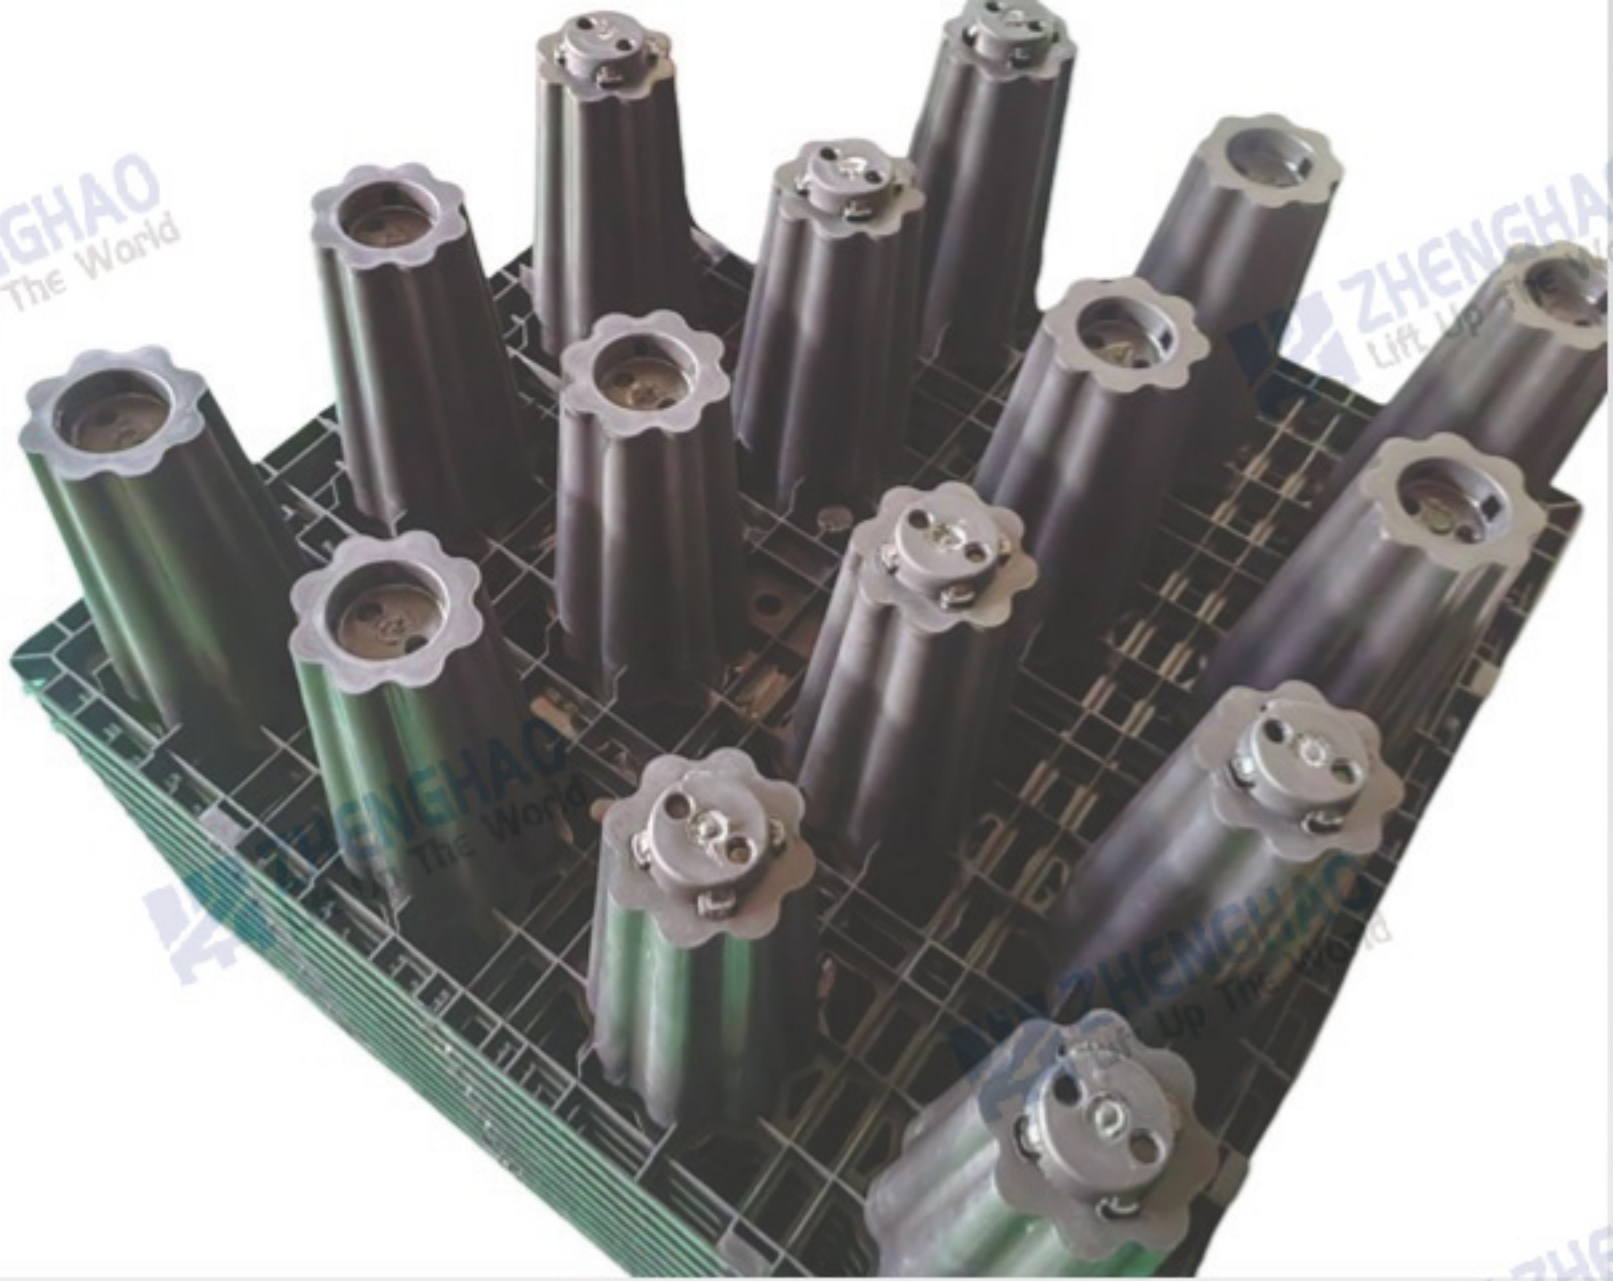

Preferred materials

The rainwater collection module adopts polypropylene resin with a long service life, which meets the requirements of green building design.

High waterstorage rate

While ensuring its high-pressure, the hollow design allows for a water storage rate of over 95%

Strong bearing capacity

The module structure has super strong pressure bearing capacity on the water tank, which can continue to be used for green squares, pedestrians and lanes, and parking lots.

Short construction period

Compared with traditional water tanks, the use of finished modular assembly technology reduces construction costs and allows for on-site assembly, enabling backfilling on the same day of excavation and greatly shortening the construction period.

SUITABLE FOR VARIOUS SCENARIOS

Survival through quality, development through reputation
and pursuit of excellence

Urban environmental
protection

Farm greenhouse

Garden watering

Flushing the vehicle

Flushing the road

Flushing toilets

CONSTRUCTION PROCESS

Step 1:
Earth excavation

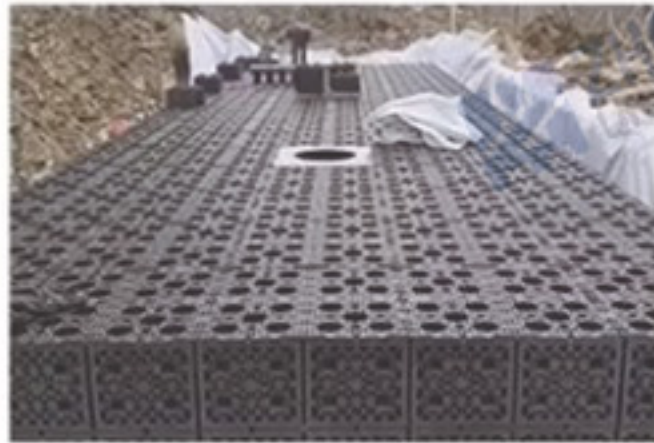

Step 2:
Reinforced concrete

Step 3:
Laying
Geomembrane

Step 4:
Place the PP
module

Step 5:
Placement
Completed

Step 6:
Geomembrane
wrapping

Step 7:
The package
is completed

Step 8:
Place the extruded
board

Step 9:
Backfilling

Project Cases

Company Profile

Zhenghao Plastic (Shandong) Co., Ltd. is a modern enterprise integrating design, development, production, sales, transportation, construction and after-sales service. Since its establishment, the company has attached great importance to product development and technological innovation, and has hired a number of well-known domestic experts as technical consultants, making the company's product technology level among the best among similar domestic companies.

The company has a laboratory equipped with advanced instruments and equipment in the industry, such as differential scanning calorimeter, water permeability coefficient tester, flat plate vulcanizer, electronic universal testing machine, tensile machine, ash tester, density tester, carbon black content tester, melting value meter, mixing mill, etc.
